Headwaters Farm Incubator Program Enters Sixth Year Supporting New Farmers as Three Farms Graduate from the Program

East Multnomah Soil and Water Conservation District (EMSWCD) is accepting applications for the Headwaters Farm Incubator Program from October 2nd through the 31st. The Headwaters Farm Incubator Program (HIP) provides agricultural resources to motivated, experienced individuals who lack a direct route to establishing their own farm businesses. Headwaters Farm is also a demonstration site for agricultural and riparian conservation practices, and is a working illustration of how farms can both increase yield and protect and enhance natural resources. Currently accepting applications for its sixth year, the program now offers a wide range of infrastructure and tools, while the growing conditions continue to improve. This year, three of the farms who started in 2013 (the program's first year) will graduate and move off Headwaters Farm to begin their farm businesses in earnest.

New farmers often face financial, institutional and cultural barriers to starting their own farm business. Farmers that lack sufficient access to capital, training, or established farm networks may not have the resources to successfully launch a farm business. In Oregon and across the nation, these issues are further compounded by an aging farmer demographic. The Headwaters Farm Incubator Program seeks to help new farmers overcome these barriers by providing low-cost land, infrastructure and equipment, while also assisting with business development, training opportunities, and a peer support network. Fourteen farms now enrolled in the program produce a wide variety of outputs. This year, in addition to diversified mixed vegetable production, HIP is inviting a wider variety of operations to apply for the 2018 growing season, including berries, livestock, herbs, flowers, and seeds. Interested individuals with farming experience are encouraged to apply, and all applicants will receive detailed feedback and additional suggested resources which may help them achieve their farm goals.

Headwaters Farm is a 60-acre property just to the south of Gresham that is owned and managed by EMSWCD. Since program launch in 2013, EMSWCD staff and incubator farmers have worked

EMSWCD | 5211 N Williams Ave, Portland OR 97222 | (503) 222-7645 | www.emswcd.org/

continuously on improving the fields and on addressing soil quality, erosion and invasive weed problems. This work has included projects ranging from soil building practices and providing pollinator habitat to taking measures to improve stream health in the North Fork of Johnson Creek, which passes through the property.

As several of the original farmers prepare to transition off Headwaters Farm and into their new business ventures, EMSWCD staff will continue to seek ways to further improve the program and help sustain local farms, forests, wildlife and communities.

The East Multnomah Soil and Water Conservation District (EMSWCD) is a unit of local government whose mission is to help people care for land and water. The EMSWCD is led by an elected board of five directors and works entirely on a voluntary, non-regulatory basis with landowners, land managers, and other residents east of the Willamette River centerline in Multnomah County. All of the EMSWCD's work is geared toward keeping water clean, conserving water and keeping soil healthy.

Contact **Rowan Steele**, our Farm Incubator Program Manager, with any questions about Headwaters Farm or the Farm Incubator Program at Rowan@emswcd.org or (503) 939-0314. Learn more about the program at <http://emswcd.org/farm-incubator/>, or read about our progress at Headwaters at <http://emswcd.org/updates-from-headwaters/>.

The EMSWCD service area includes all Multnomah County east of the Willamette River. The location of Headwaters Farm is also shown here.
