

# Native Plants for Part Sun

## Native Plant Resources

Want more information on these species and many more? Here are some great online resources.

### EMSWCD's Native Plant Guide

Check out OregonFlora's "Grow Natives" plant selector tool: [oregonflora.org/garden/index.php](https://oregonflora.org/garden/index.php)

Once you've decided what species you want to plant, here are several places to find plants for sale or trade.

### Local Sources of Native Plants

Join EMSWCD's Facebook Plant Swap group: <https://facebook.com/groups/emswcdnativeplants>

## Choose the best plants for your yard

Every plant needs sunshine and water, but some need more or less than others. Use this guide to help you group plants with the same light and moisture needs together! Your plants will be healthier and need less maintenance.

## Why native plants?

- Adapted to our climate
- Need less water and fertilizer when established
- Provide food and shelter for wildlife
- Fewer pest problems without using pesticides

**CONSERVATION DISTRICT**

*We help people care for land and water*

## How do I use this guide?

This guide provides plant suggestions for areas that are partly sunny. The plants on the next page are grouped by how much water they need. For example, if you have a partly shaded spot in your yard and you want to find plants that will need a lot of moisture, look in the third column, titled “wet soil.”

Trillium

## Right Plant – Right Place

When you are ready to plant a section of your yard, first determine how much sun and moisture the area gets, then choose a plant that matches those conditions. The right plant, for the right place!

## Why is it important to plan for sun and water?

- Plants won’t need extra watering
- They will grow better AND faster
- You can save money and time

Western columbine

## How can I learn more?

EMSWCD offers FREE workshops that show examples of native plant communities and provide tips to help them thrive!
